Claim Rejection under 35 U.S.C. 103(a)

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over LeClair et al (US 4,372,777; 2/8/83) on record, Arnold (US 5,612,285; 3/18/97) on record and JP 63303903; 12/12/88 on record. LeClair teaches a solid herbicide composition in suspension form comprising a herbicide, EO/PO copolymer, and an alkyl phenoxy polyoxyethylene ethanol. See abstract, claims. LeClair does not teach the herbicide composition comprising a) glyphosate or ammonium sulfate. However, Arnold teaches a solid herbicide composition comprising glyphosate, EO/PO copolymer, and polyethylene glycol. See abstract, column 4 lines 14-51. And JP '903 teaches a solid herbicide composition comprising ammonium sulfate. See abstract. It would have been obvious to one having ordinary skill in the art to combine the prior art compositions. One would have been motivated to do this since all prior art compositions are individually taught to function as herbicidal compositions. In the absence of unexpected results, an artisan would have included any alkyl phenoxy polyoxyethylene ethanol, including those of the instant claims, in the composition. An artisan would have been motivated to do this since all alkyl phenoxy polyoxyethylene ethanol structurally similar. With respect to particle size and amounts of

Art Unit: 1616

ingredients, an artisan would have been expected to optimize the composition. An artisan would have been motivated to do this in order to make the most effective herbicidal composition.

Claim Objection

Claims 19,20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not teach or suggest the instant composition comprising hydroxy methylthio butanoic acid.

Telephonic Inquiry
